REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The closest prior art of reference is taught by Scheurer (US 5,277,742).

2. Scheurer teaches a tire labeling system used for positioning a label on a tire tread surface of a specific tire, the tire labeling system comprising:

an applicator (19) configured to receive the label for placement on a tire tread surface of the specific tire;

a frame (1) carrying the applicator, the frame directly moving the applicator along a vertical axis (A, B), a horizontal axis (C, D), and a diagonal axis (E, F), including:

a first guide for linearly moving the applicator along a vertical axis;

a second guide for linearly moving the applicator along a horizontal axis;

a third guide supported by the second guide for linearly moving the applicator along a diagonal axis; and

a rotatable arm (15) carried by one of the guides, wherein the rotatable arm is rotatable with respect to the vertical axis and picks up a label from a supply (25), and then moves the rotatable arm along the axes so as to apply the label to the tire tread surface of the specific tire.

However, Scheurer does not teach or suggest an apparatus nor a method to place a label on the tread surface of a tire within a stack of tires, further comprising a computer adapted to receive tire information and position information regarding a specific tire within a stack of tires; and a printer receiving the tire information for the specific tire from the computer and printing the tire information on the label.

Art Unit: 1745

Furthermore, Scheurer does not specifically teach for each of the three guides to be supported by another of the remaining two guides.

Another close prior art of reference is by Kokobu et al. (US 6,144,033).

Kokobu et al. teach a tire labeling system used for positioning a label on the surface of a tire, comprising:

- a marking device with a print head for printing identification information on a label to be attached to a tire (column 6, lines 6-16),
- a single applicator (20) configured to receive the label for placement on the tire,
- a frame (7) carrying the applicator, the frame facilitating movement of the applicator,
- a horizontal drive unit (10) (i.e. first guide) for moving the applicator along the first axis,
- a rotating mechanism (8) (i.e. second guide) for a shaft (9) supported by the drive unit for moving the applicator along a second axis (X-X), and
- a cylinder actuator (26) (i.e. third guide) supported by the second guide for pushing the applicator along the third axis and towards a tire (1) (column 3, lines 17-63; column 4, lines 54-58; Figure 3), to pick up the label and apply the label to the tire.

Although Kokobu et al. teach sorting tires by the label and an image processing device (31) in communication with a controller (35) to print an appropriate mark, (column 5, lines 12-14 and lines 31-42), Kokobu et al. do not teach or suggest an apparatus or method to place a label on the tread surface of a tire within a stack of tires,

Art Unit: 1745

further comprising a computer adapted to receive a specific tire's information and position and a rotatable arm carried by one of the guides, wherein the rotatable arm is rotatable with respect to one of the axes and is moved to apply the label to the tire tread surface of the specific tire within the stack of tires.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
